

PERFORMANCE TESTING REPORT

Date	6 July 2026
Maximum Marks	5 Marks
Team ID	—
Project Name	AI Student Evaluation Dashboard

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

STEP 1: TESTING OVERVIEW

Field	Details
Testing Tool Used	Apache JMeter
Type of Testing	Load Testing & Stress Testing
Target Module / API	AI Analysis Engine & Student Performance Dashboard view (/dashboard, /report)
Test Environment	Local Host Server (localhost:8501)
Test Date	6 July 2026

STEP 2: TEST SCENARIOS

S.No	Test Scenario / Description	Virtual Users	Duration (sec)	Expected Outcome
1	Concurrent user access to the main Student Performance Dashboard layout view.	50 Users	120 sec	Page loads completely under 2 seconds with 0% error rate.
2	Simultaneous execution of text transcript evaluation queries and AI feedback generation requests.	20 Users	180 sec	AI core engines process text accurately without processing timeouts.
3	Parallel generation and downloading operations of the unified AI Analysis Report.	30 Users	60 sec	System compiles reports continuously with stable thread processing behavior.
4	Stress testing to discover the peak ceiling limits for multi-page component navigation loops.	100 Users	60 sec	System maintains UI routing states with gracefully low error rate (<1%).

STEP 3: PERFORMANCE TEST RESULTS

S.No	Metric	Target Value	Actual Value	Status	Remarks
1	Response Time (Avg)	< 2 seconds	1.45 seconds	Pass	Highly responsive.
2	Response Time (Max)	< 5 seconds	3.82 seconds	Pass	Peak during AI analysis.
3	Error Rate	< 1%	0.15%	Pass	Zero major drops.
4	CPU Utilization	< 80%	68.5%	Pass	Stable core behavior.
5	Throughput	> 15 Req/sec	24.2 Req/sec	Pass	Efficient transactions.
6	Memory Utilization	< 80%	58.2%	Pass	Clean caching state.

STEP 4: OBSERVATIONS & ANALYSIS

Key Findings:

The analytics metrics confirm excellent application stability under continuous standard operational workloads. Dashboard operations, automated metrics rendering (Score: 95.45%, Similarity: 97.75%, Classification: Strong Understanding), and the core rules-based feedback layout component perform with solid transaction throughput speeds. The local Streamlit server handles parallel routing events with predictable overhead trends.

Bottlenecks Identified:

Minor processing delay jumps were noted whenever multi-user blocks concurrently initialized background NLP text evaluation and transcript assessment queries. This high concurrency momentarily causes localized spikes in CPU utilization rates due to intensive pattern matching steps.

Optimization Steps Taken:

Integrated fine-grained Streamlit state caching optimizations for standard text analysis outputs to cut down recurring computational steps. Furthermore, modular asynchronous processing flows were instituted across background feedback modules, isolating core UI layout threads from extensive background computation tasks.

STEP 5: SCREENSHOTS / EVIDENCE

Below are verified interface captures from the local server deployment execution environment (localhost:8501), covering the full evaluation workflow end to end:

Screenshot 1: VBCUA Home — Concept Selection (Step 1)

The application landing view, showing the Whisper model-size setting and the concept selection dropdown ("Cloud Computing") with its reference explanation panel expanded.

Screenshot 2: Upload Spoken Explanation (Step 2)

The audio upload step, with a .wav recording (audioclip.wav, 8.4MB) loaded, playable in the built-in audio player, and the "Analysis complete!" confirmation shown after running the analysis.

Screenshot 3: Evaluation Results — Live Application Run (Step 3)

The Evaluation Results panel (Final Score, Semantic Similarity, Fluency Score, Classification), the transcribed explanation, and the waveform visualization.

Screenshot 4: Detailed Metrics & Qualitative Feedback (Step 4)

Detailed metrics (filler words, RMS energy, pause ratio, audio duration), qualitative feedback bullets, and the final “Download PDF Report” action.
